7. Development of a Cellular System Performance Dashboard Using Figma

Aim:

To develop a dashboard prototype in Figma displaying important performance criteria of a cellular communication system.

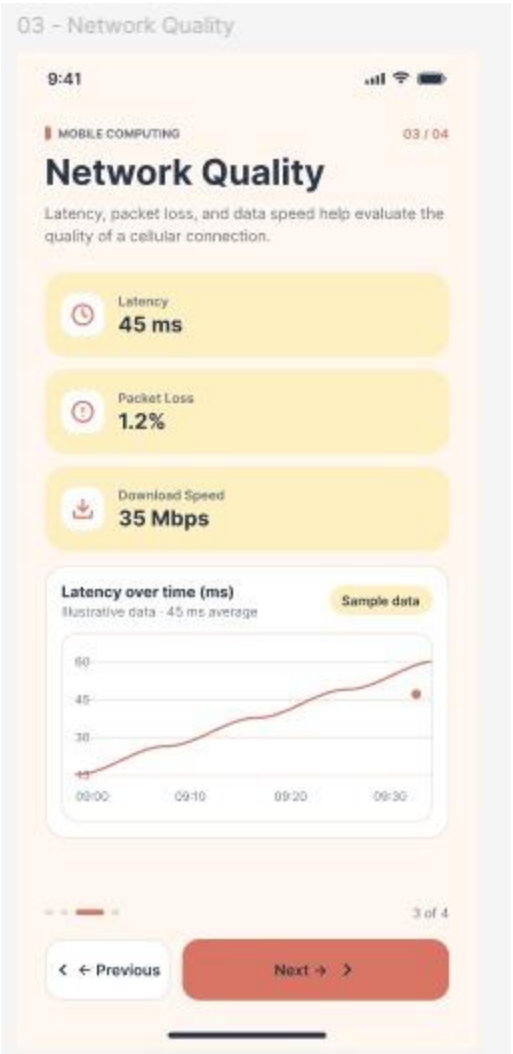

Procedure:

1. Open Figma and create a new desktop dashboard frame.
2. Design a header containing the title “Cellular Network Performance Dashboard.”
3. Add cards to display key performance indicators such as signal strength, network latency, throughput, call drop rate, and network availability.
4. Use charts and graphs to represent network performance over time.
5. Add progress bars, status indicators, and color-coded labels to highlight network conditions.
6. Create a sidebar containing options such as Overview, Network Status, Performance, and Reports.
7. Arrange all elements using consistent fonts, colors, spacing, and alignment.
8. Use prototype links to connect dashboard sections and simulate navigation.

02 - Signal and Coverage
9:41
MOBILE COMPUTING
02 / 04
Signal & Coverage
Compare signal strength across locations and review coverage quality.
SIGNAL STRENGTH CHART
Illustrative values: stronger signals appear closer to 0 dBm.
A
-55 dBm
B
-65 dBm
C
-75 dBm
D
-90 dBm
COVERAGE QUALITY
Signal strength affects call quality, data speed, and connection reliability.
Strong Signal
Best for voice, video, and fast data.
Moderate Signal
Stable for browsing and most mobile use.
Weak Signal
May cause drops, delays, or slower speeds.
Illustrative data only — not live measurements.

03 - Network Quality

04 - Reliability Summary

Result:

A cellular system performance dashboard prototype was created in Figma to visualize key network performance indicators using cards, charts, graphs, and status indicators.
